PERFECT TRAC

The *Perfect Trac* is a revolutionary product that is changing the way we cut concrete. The *Perfect Trac* is built with a solid aluminum design which is not only durable, but it is also lightweight which helps with transporting and maneuvering the saw. Its low center of gravity and weight-driven design provides less vibration, cleaner cuts and little-to-no chipping in the concrete.

Replacing the motor is a breeze with the interchangeable motor design. Instead of having to buy a new saw or pay for expensive repairs, the *Perfect Trac* allows you to swap in a new motor at a fraction of the cost.

MADE IN THE USA!
